Cellular One Expands Cellular Coverage throughout Montana

--Five new cell sites greatly increase coverage in the state's rural areas--

Missoula, MT - December 2, 2008—Residents of the state of Montana will now have expanded cellular coverage due to the construction of five new Cellular One cell sites throughout the state. “As part of Cellular One’s commitment to bring cellular coverage to the rural areas throughout the state of Montana, we are proud to continue to expand our service by introducing five new cell sites in the state within the last three months,” said Jonathan Foxman, CEO and President of Cellular One.

The first site is in Gold Creek, and provides coverage along I-90 between Drummond and Garrison Junction. The second is in Southwest Butte providing coverage along the I-90/I-15 corridor and along Montana Highway 2 South of I-90/I-15. The third is in West Anaconda providing coverage along Montana Highway 1 and additionally to the West Valley of Anaconda. The fourth new site is located outside of Missoula in Thompson Falls on Montana Highway 200. The fifth new cell site is in Fergus County outside Great Falls, and will provide in-vehicle coverage on US Highway 191 and US Highway 87. This site will also provide coverage to the towns of Sipple, Hobson, and Moore.

These five new cell sites will offer a great deal of additional in-building coverage, as well as in-vehicle emergency coverage for drivers along each of these routes. Foxman continued, “The combined estimated vehicular traffic along these routes is over 30,000 cars per day. Considering

this amount of traffic, it was important to Cellular One to make sure that these drivers could count on their cellular coverage in case of an emergency.”

Cellular One is pleased to offer GSM Technology, Global System for Mobile Communications, one of the most advanced wireless technologies in the world. The Cellular One all-digital GSM network is more advanced than current CDMA technology and allows for a wider offering of products and services. GSM Technology is the most successful digital technology in the world, offering customers better call quality and state-of-the-art GSM phones. Cellular One is the only wireless provider to offer GSM technology on a complete network within Montana. Other carriers offering GSM technology within the United States include AT&T and T-Mobile.

About Cellular One
